INTRODUCING

HIGH CURRENT PRINTED CIRCUIT BOARD POWER TAP

- High current, up to 40A
- Enhanced retaining and anti rotational features
- More reliable and stable connections

TE Connectivity, (TE), introduces this high current, up to 40A, Printed Circuit Board (PCB) Power Tap with screw, designed to bring power supply to PCB applications. It is mainly aimed for induction cooktops, but not limited to this application. TE Power Tap will help you realize more efficient PCB connections. The preassembled screw, (treated with Nylok film), will ensure easier handling and more reliable assembly process overall.

TARGET MARKETS

- Appliances
- HVAC
- Industrial Machinery
- Automotive

APPLICATIONS

- Major Home Appliances
- Small Home Appliances
- HVAC Equipment
- Machines
- Control Units

DESIGN-IN QUESTIONS

- Are you looking for PCB terminal up to 40 A?
- Do you need PCB terminal with Nylok feature to prevent unintentional disconnection?
- Do you need PCB terminal with robust post to keep position and stabililty on PCB before soldering?
- Do you want to reduce soldering temperature, while improving connection quality?
- Do you want to reduce the cost of the assembly process?
- What are the flammability requirements for your application?

KEY BENEFITS

- Suitable for high current applications, up to 40A
- Screw is supplied pre assembled
- The Nylok film treatment, along with the unique screw geometry, prevents the screw from loosening during transportation and handling
- Additionally, it reduces the likelihood of the operator fully unscrewing the part and causing it to come loose
